## Recommendation 4.1 Evidence Profile (Quantitative)

Recommendation question 4: Should physical activity be recommended to improve outcomes in persons living with fecal incontinence and/or constipation?

Recommendation 4.1: The expert panel recommends that as part of a wider multicomponent program, health providers encourage persons living with constipation to engage in low-intensity physical activity for about 30-60 minutes (as tolerated) at least three times a week to help manage constipation.

Population: Adults living with constipation or fecal incontinence

Intervention: Exercise/movement Comparison: No exercise/movement Outcomes: Quality of life, constipation

Setting: Community

Exercise intervention for 12 weeks, 3 times/week, each session lasting 60 min.  Control group received "standard" care for constipation and same low-calorie diet. | N=62  Overall PAC-QOL score = 1.38 ± 0.53  SF-36 PCS score = 49.6 ± 3.14  SF-36 MCS score = 49.2 ± 2.21                  | N=63  Overall PAC-QOL score = 1.67 ± 0.36  SF-36 score = 48.6 ± 2.33  SF-36 score = 47.1 ± 2.41 | The study reported an improvement in quality of life in persons living with incontinence who underwent the physical activity intervention in comparison to the control group. | ⊕⊕⊖⊖<br>LOW | 5509:<br>Tantawy et<br>al., 2017 |

## Registered Nurses' Association of Ontario L'Association des infirmières et infirmiers autorisés de l'Ontario

Speaking out for nursing. Speaking out for health.

## Explanations

- a. Based on ROBIS tool for systematic reviews, the study had some concerns in how the study was conducted. We downgraded by 1.
- b. Based on the ROBINS-I tool for quasi-experimental studies, the study had very serious concerns related to risk of bias due to limitations in how the study was conducted. We downgraded by 1.
- c. Total number of participants was less than the optimal 400 participants. We downgraded by 1.
- d. Based on the Risk of Bias tool for Randomized Controlled Trials, the study had some serious concerns related to risk of bias due to limitations in how the study was conducted. Therefore, we downgraded by 1.5.
