

Registered Nurses' Association of Ontario:
Supporting Adults Who Anticipate or Live with an Ostomy, Second Edition
April 2019

Systematic Review Search Strategy

Concurrent with the review of existing guidelines, a systematic review for recent literature relevant to the scope of the guideline was conducted by a health sciences librarian.

In addition, panel members were asked to review personal libraries to identify key articles not found through the above search strategies. Articles identified by panel members were included in the search results if two nursing research associates independently determined the articles had not been identified by the literature search and met the inclusion criteria.

Databases Searched: CINAHL, Cochrane Central, Cochrane Central Register of Controlled Trials, Embase, Medline, Medline Ahead of Print and In Process,

Inclusion Criteria:

The following criteria were used to guide the literature search:

- A primary focus on the following interventions for adults (18 years or older) who anticipate or live with an ostomy and the prioritized outcomes per topic:
 1. **Intervention** - Access to nurses specialized in wound, ostomy and continence
Outcomes – Peristomal dermatitis, peristomal irritation, ostomy leakage, quality of life, hospital length of stay, readmission rates to hospital
 2. **Intervention** - Ostomy care programs
Outcomes – Patient satisfaction, hospital length of stay, readmission rates to hospital, staff satisfaction
 3. **Intervention** - Prevention of parastomal hernia development
Outcome – Parastomal hernia rates
 4. **Intervention** - Quality of life assessment
Outcomes – Psychological health status, self-identity
- Published between January 2012 and April 2018
- Published in English
- Accessible for retrieval
- Applicable across health settings/sectors where nurses provide direct clinical

care to adults who anticipate or live with an ostomy

- Primary focus on Nurses (RN, RPN, NP, CNS)
- Secondary focus on other health-care providers (whose scope of practice overlaps with nursing)
- Applicable to context of developing countries
- Peer-reviewed
- Study methodology limited to any study design (quantitative, qualitative, mixed methods, and reviews)

Exclusion Criteria:

The following criteria were used to exclude literature from the search:

- Topic **NOT** related to the following interventions for adults who anticipate or live with an ostomy and the prioritized outcomes per topic:
 1. **Intervention** - Access to nurses specialized in wound, ostomy and continence
Outcomes – Peristomal dermatitis, peristomal irritation, ostomy leakage, quality of life, hospital length of stay, readmission rates to hospital
 2. **Intervention** - Ostomy care programs
Outcomes – Patient satisfaction, hospital length of stay, readmission rates to hospital, staff satisfaction
 3. **Intervention** - Prevention of parastomal hernia development
Outcome – Parastomal hernia rates
 4. **Intervention** - Quality of life assessment
Outcomes – Psychological health status, self-identity
- Studies focused on pediatric population (younger than 18 years)
- Dissertations, commentaries, narratives, discussion papers, case studies, expert reports, consensus documents, studies with a specific methodology
- Studies not published in English
- Unpublished (grey literature)
- Lab studies in any type of animal
- Studies published prior to 2012
- Articles related to building or validating assessment/screening tools
- Articles with a specific focus on effectiveness of certain pharmacologic or surgical interventions

Search Terms

Question: Q1. Should access to ET nurse versus usual care be used to improve outcomes in adults anticipating or living with ostomies?
